

Enterprise Healthcare E-Commerce Automation Framework using Playwright and JavaScript

Project Overview

This project is an End-to-End Automation Testing Framework developed for the Med Plus Mart Healthcare E-Commerce website using Playwright and JavaScript. The framework automates major business workflows such as authentication, product search, cart management, shipping workflows, session persistence, customer support validation, and API testing. The project focuses on validating real-world ecommerce functionalities, dynamic UI behaviours, API responses, and user workflow stability across multiple browsers.

Website: [MedPlusMart](#)

Technologies Used

- Playwright
- JavaScript
- Node.js
- Visual Studio Code
- HTML Reports
- Allure Reports
- GitHub Actions
- Page Object Model (POM)
- API Testing
- Cross Browser Testing

Services Covered

1. Authentication Service
2. Product & Search Service
3. Cart Management Service
4. Persistence & Session Management Service
5. User Profile Service
6. Address & Shipping Service
7. Customer Support Service
8. API & Internal Service

Main Features

- 120+ Automated Test Cases
- Cross Browser Execution
- Session Persistence Testing
- API Automation
- HTML & Allure Reporting
- Reusable Page Object Model
- End-to-End Workflow Validation
- Dynamic UI Testing
- Network & API Validation
- Parallel Test Execution

Modules & Test Coverage

Authentication

Product & Search

Cart Management

Persistence & Session Management

User Profile

Address & Shipping

Customer Support

API Testing
